

## Mock Interview Rules & Guidelines (AWS DevOps – Freshers & Experienced)

### Objective:

This mock interview session is designed to help students practice real interview scenarios, improve confidence, and prepare for technical interviews—especially for AWS DevOps roles.

There are no marks; the focus is on learning, communication, and building confidence.

### Group Format:

- Each Zoom breakout room will consist of 4 students.
- **Role Assignment:**
  1. **Interviewer** – Asks questions from the sheet.
  2. **Interviewee** – Answers questions as if in a real interview.
  3. **Observers** – Can assist, take notes, or simply watch the interaction to learn.

### Question Format:

- Each topic (e.g., EC2, Docker, Kubernetes, etc.) includes 3 categories:
  - Easy – For freshers
  - Medium – For 1–2 years experienced
  - Advanced – For 2+ years experienced
- Each question comes with:
  - Interview-style phrasing
  - Expected Answer
  - Hint (in case interviewee struggles)

### Materials:

- Each participant will receive the question set (with hints and expected answers).
- Everyone should read the questions as if it's their first time seeing them – to simulate a real interview scenario.
- After the session, students can review the answers again for learning.

## Rules & Best Practices (Updated)

1. Be respectful and professional during the session.

2. Interviewers should follow the structure:

**Definition → Detail → Scenario → Follow-up.**

3. Interviewers can refer to the hint if the interviewee is struggling.

4. Interviewee should answer to the best of their ability – not just theory, but include practical experience or projects if possible.

5. Observers are encouraged to take notes and provide feedback if asked.

6. You can switch roles (interviewer/interviewee/observer) after the first round if time permits and the group finishes early. Otherwise, maintain roles for the session.

7. Keep track of time and pace the questions accordingly.
